Excellence in
Endoscopy**

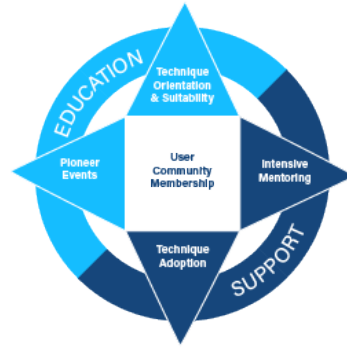

Support

Pioneer Programme

Empowering Excellence in Endoscopy

The Pioneer Clinical Education Programme is our commitment to developing Healthcare Professionals through learning pathways designed to achieve improved patient outcomes in therapeutic endoscopy—it's your pathway to success!

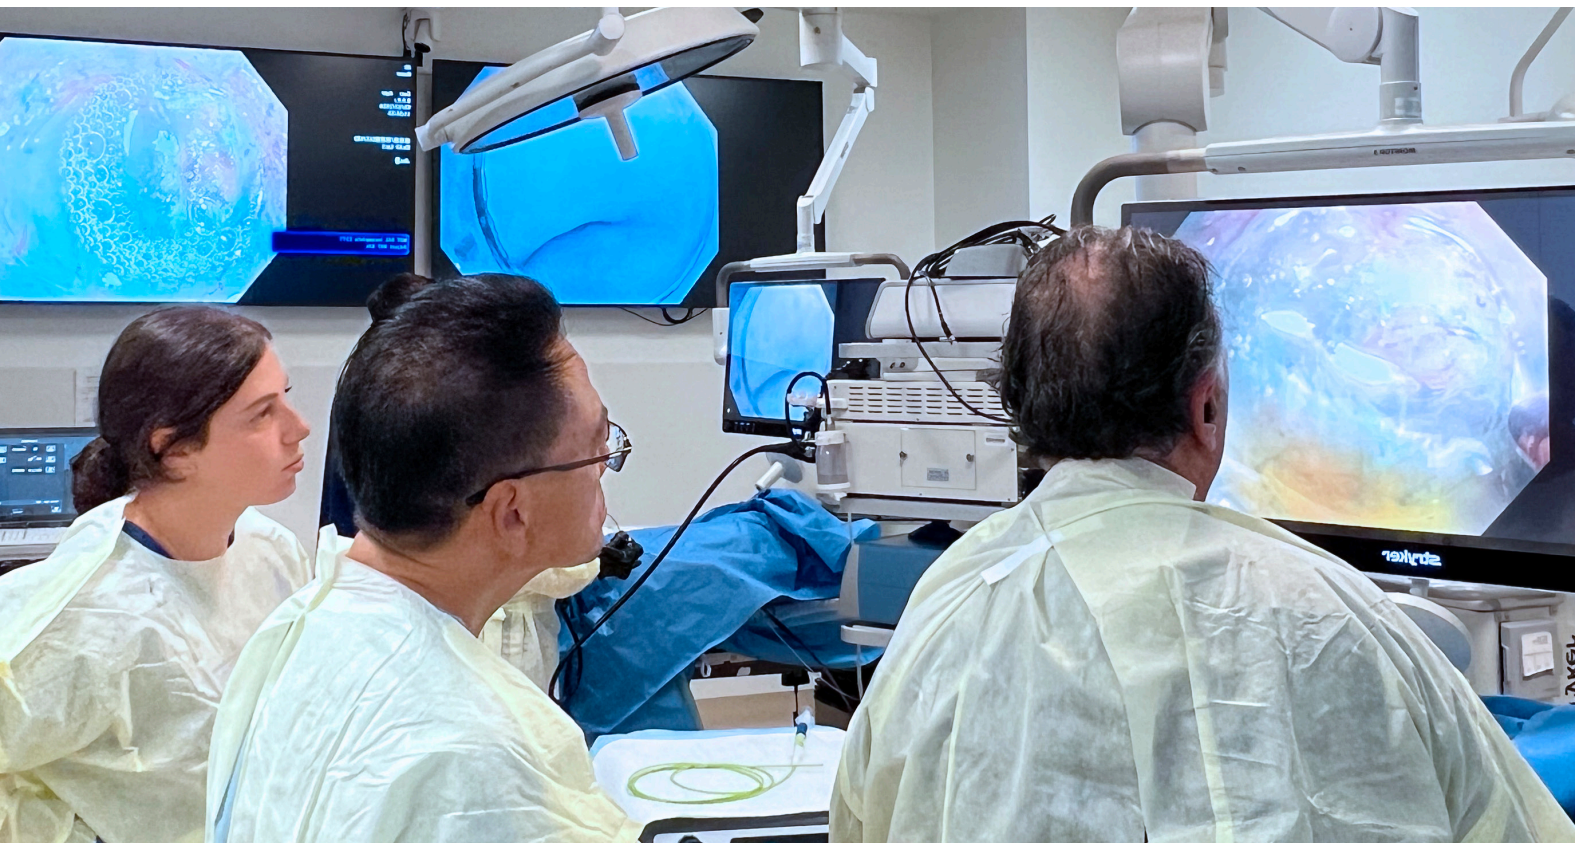

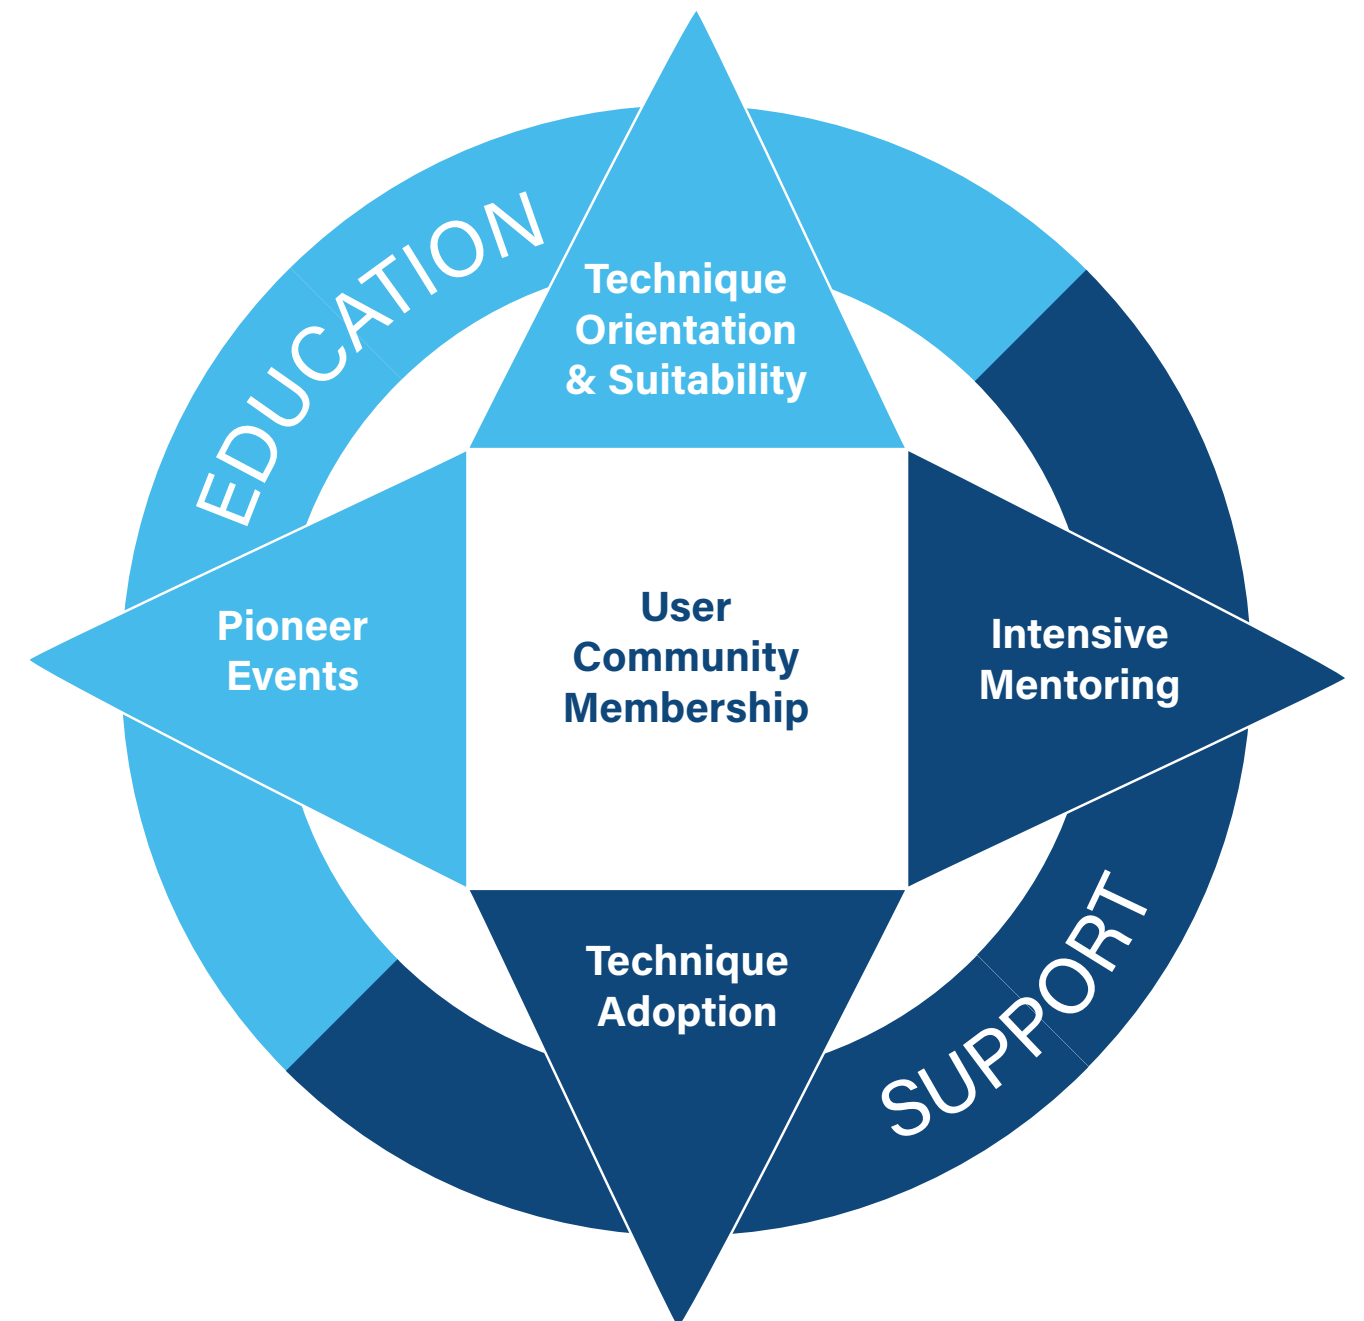

Inspired by esteemed medical guidelines and curricula, our comprehensive programme supports healthcare professionals to develop and enhance your skills in third space resection and dissection procedures with Creo Medical's advanced energy devices.

The Pioneer Experience

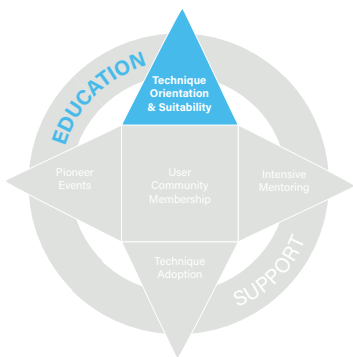

A Tailored Learning Experience

Our Pioneer Clinical Education Programme is tailored to your experience level and individual learning needs, with the help of our team you can select the options that suit you. It offers a tailored programme, where you'll work one-on-one with global gastroenterology experts, who will provide you with hands-on experience and mentoring in third space therapeutics, using our Advanced Energy devices.

Education

Technique Orientation
& Suitability

During this phase, we collaborate closely with you to determine your readiness to progress. You'll receive hands-on instruction with ex-vivo models and an online overview of advanced energy modalities.

Together, we will map out your journey to becoming proficient with our device and mastering this innovative technique.

Felt a great privilege to learn so much. Looking forward to joining the adopters of this technique and equipment.

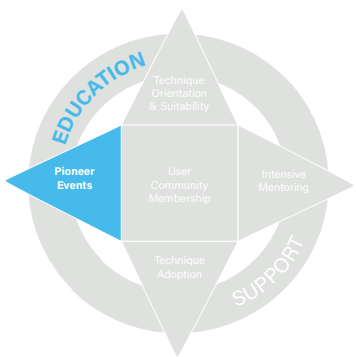

Ex-Vivo Assessment

You will be invited to get a feel for the devices with an ex-vivo assessment. At this stage, you'll have the opportunity to decide if you're ready to commit and move forward with the programme.

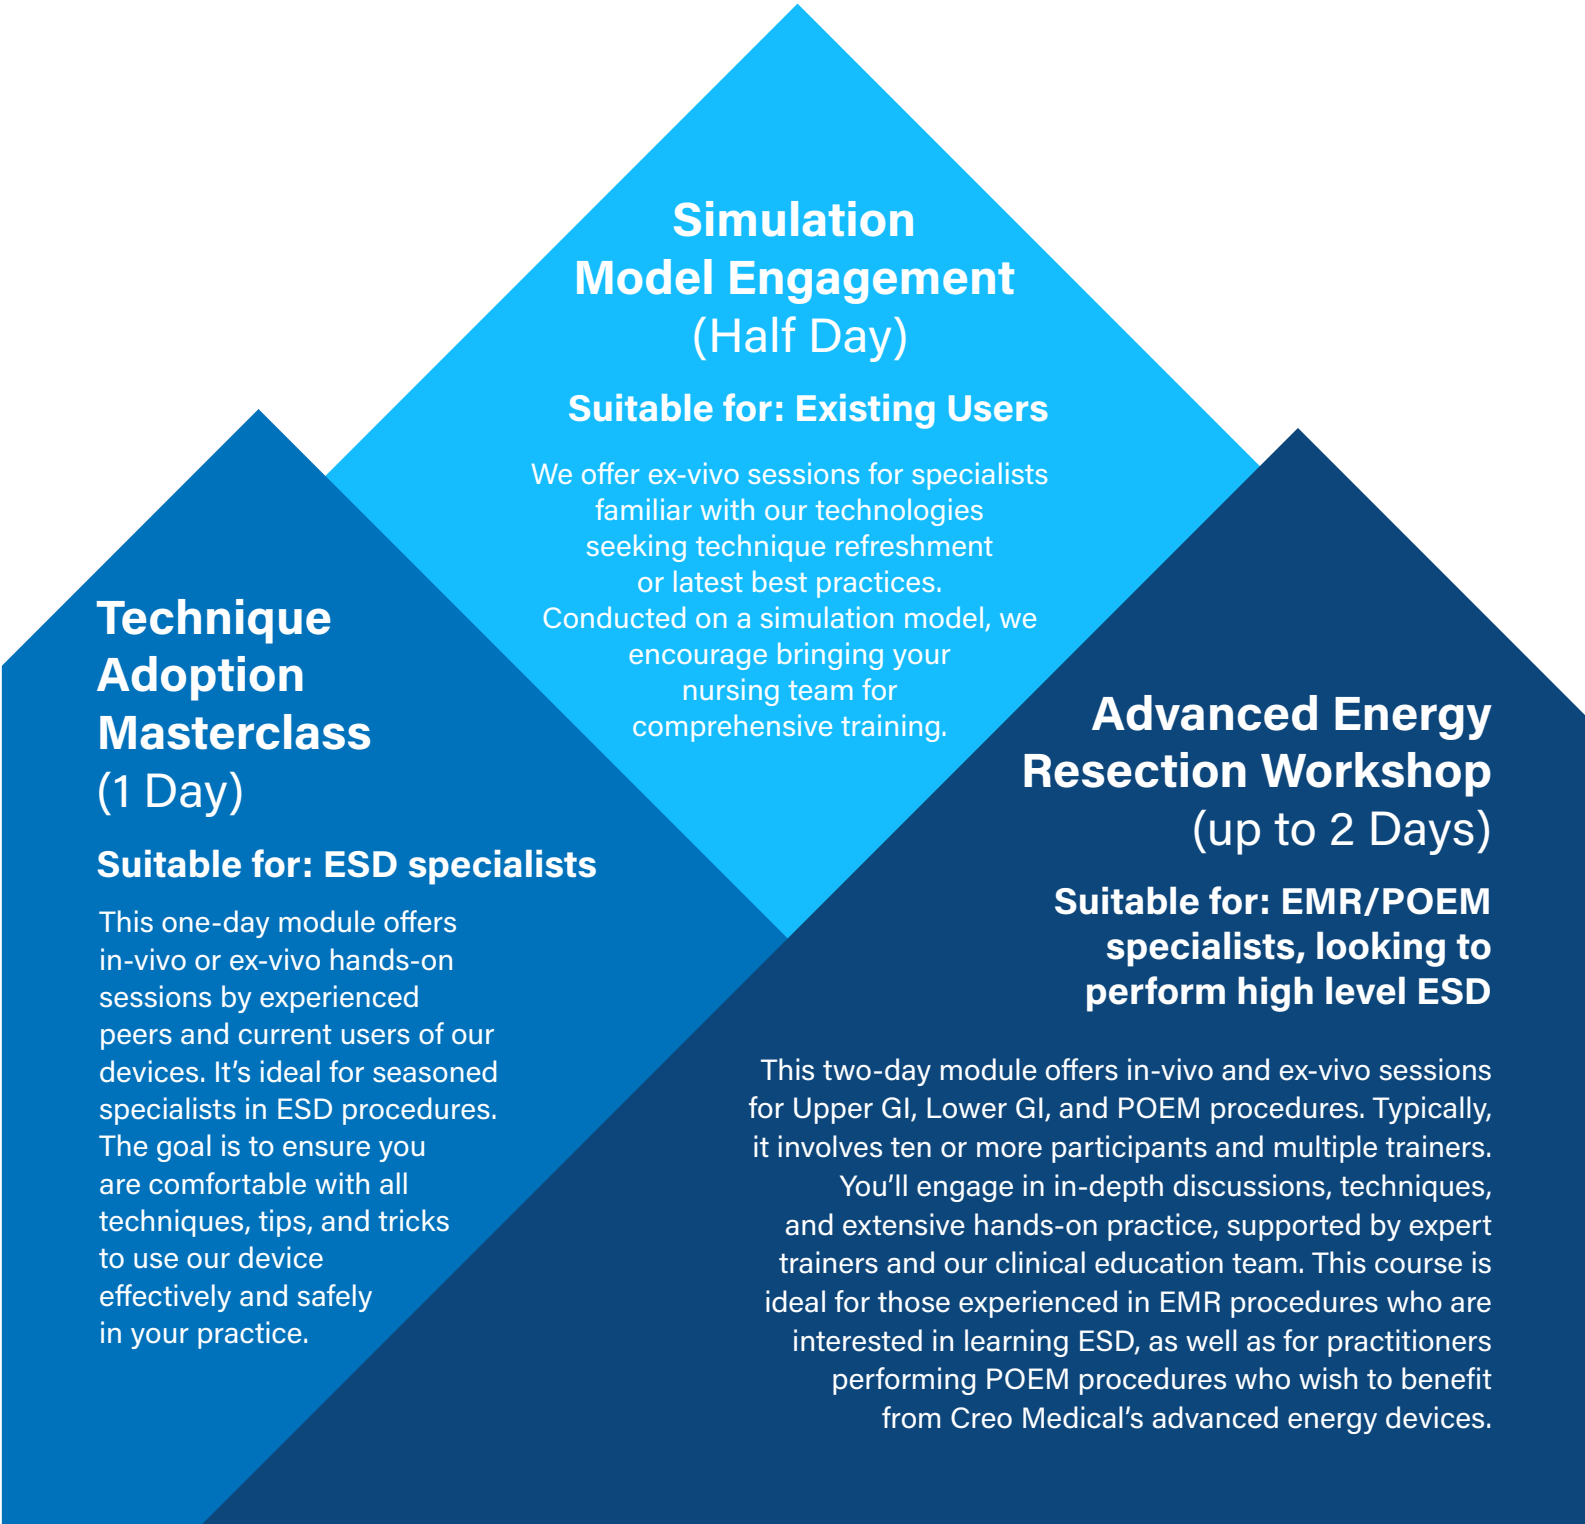

Education

Pioneer Events

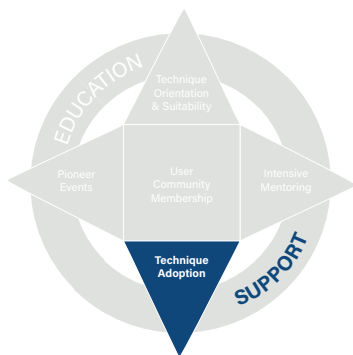

Join our expert-led programme for an immersive, hands-on experience over 1 or 2 days, featuring both practical and theoretical learning. You'll receive personalised guidance using both ex-vivo and in-vivo models. These tailored events help prepare you with the relevant skills and confidence before advancing to human cases.

Support

Technique Adoption

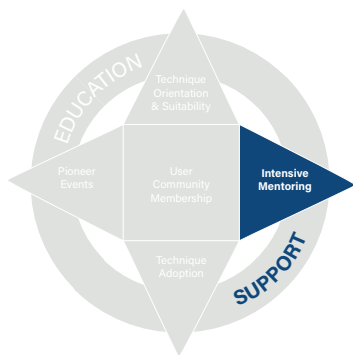

Throughout your journey, your progress will be reviewed regularly with your mentor. You'll have access to remote and direct support from our clinical team, with performance data recorded in independent registries to measure your continued development. We're also available to train your endoscopy unit team.

As you encounter new challenges, we'll be right by your side.

Support

Intensive Mentoring

A mentoring programme with third space experts can take place at your site, an alternative Centre of Excellence, online, or a combination of these, depending on trainer availability and your needs.

Experienced users typically need minimal mentoring or case support, however, we offer different levels of case support depending on your experience.

It was a great course. I have gained a lot of knowledge as it was more hands on than other events I've attended.

Brilliant course, best hands on experience. Would highly recommend!

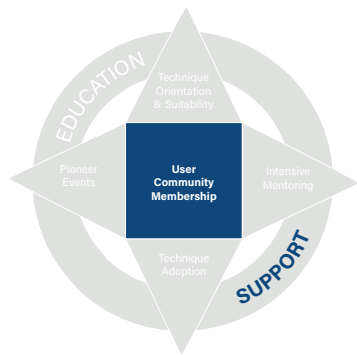

Support

User Community Membership

As a Creo Medical Pioneer, you will have full access to the Creo Pioneers online community, where you collaborate with peers to share, discuss, discover, and develop new approaches using Creo Medical's Advanced Energy, to support your learning journey as you progress through the Pioneer Programme and beyond.

Additionally, you'll have the chance to be invited to Creo Medical user meetings, where you can exchange best practices with experts from around the world.

Dr Yutaka Saito discussing Creo Medical's Advanced Technology with our panel of experts at DDW 2024.

Dr Hon Chi Yip, Dr Alberto Baptista, Dr Adolfo Parra-Blanco, Prof Norio Fukami, Dr Zach Tsiamoulos and Dr Mohamed Othman at the pre-DDW Creo Medical user meeting in Chigaco

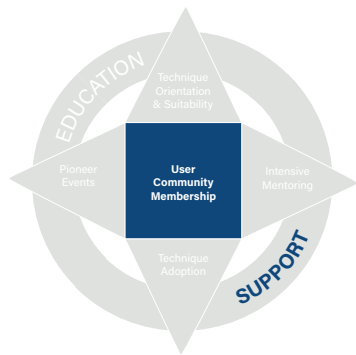

Dr Zach Tsiamoulos presents his latest data on using Speedboat technology

Our Clinical Advisors & Trainers

Our Clinical Advisory team leverages their extensive endoscopy suite experience and specialist product expertise to support clinical and nurse assistants during event taster sessions, face-to-face pioneer events, follow-up mentoring, and advice. They offer invaluable local knowledge, hints, and tips for best practices.

Our clinical trainers, practicing physicians from hospitals and institutions worldwide, are acknowledged specialists with extensive experience using our solutions to treat diverse patients. They deliver face-to-face programs and follow-up mentoring, with some trainers also providing remote support via virtual technology.

Creo Medical EMEA Clinical Advisory Team with our expert trainers including Dr Eduardo Albeniz Arbizu, Dr Zach Tsiamoulos and Dr Roser Vega

Creo Medical USA Clinical Advisory Team with our expert trainers including Dr Salmaan Jawaid and Dr Mohamed Othman

Creo Medical APAC Clinical Advisory Team with our expert trainers Dr Simon Chu, Dr Hon Chi Yip and Dr Gaurav Patil

All the staff in the laboratory are just impressive and amazing.

Start your journey

Is the Pioneer Programme right for you?

Our programme is designed to enhance your existing skills, build on your solid foundation in diagnostic endoscopy, and elevate best practices using our Advanced Energy devices. To start your Pioneer learning journey, please visit our website to get in touch.

Requirements and eligibility:

Experience level

Our programme is open to clinicians at all experience levels, and it is particularly welcoming to those who are relatively early in their careers. You might be a fellow, resident, junior attending physician, or an experienced Ph.D. doctor looking to learn new technologies and procedures.

Hospital or institutional support

Some programs may require endorsement or support from your institution or hospital. This ensures you have the necessary resources and time to fully engage in the program.

An understanding

A good grasp of electrosurgical principles will help you understand how the devices work and ensure you get the most out of the program.

Licensing and credentials

You must hold valid medical licenses and credentials for your respective country or region to ensure success.

Commitment

You should be committed to actively participating in the program. This includes attending workshops, hands-on experiences, and observing other experts to gain further insights.
