

Speedboat™
Notch

Multi-modal endoscopic device with advanced tissue traction features

Advanced Energy-powered bipolar RF dissection and microwave coagulation for gastric, oesophageal and colonic procedures in the Upper and Lower GI tracts

Anything is Possible
with the Right Approach

Speedboat Notch: Safety & Stability

Advanced Tissue Traction

Speedboat Notch is engineered with advanced tissue traction, precise tissue dissection, and an innovative notch tip design for depth perception —advancements that provide precise control, improved tissue interaction, and optimal procedural outcomes.

Seamlessly integrating with CROMA advanced bipolar RF cutting technology and super high-frequency (SHF) 5.8GHz microwave coagulation, Speedboat Notch offers a versatile, all-in-one solution for complex tissue resection and efficient haemostasis, for Lower GI, Upper GI Gastric, and Upper GI Esophageal procedures.

Speedboat Notch Features:

- Advanced tissue traction provides precision and control
- Precise tissue dissection provides controlled cutting capability
- Innovative notch tip design for depth perception, engineered to provide safe dissection and coagulation for haemostasis

Lower GI

Upper GI Gastric

Upper GI Esophageal

Innovative Notch Tip Design for Depth Perception

Precise Tissue Dissection

Advanced Tissue Traction

Speedboat Notch: Precision & Control

Precise advanced bipolar RF cut

The blade design controls the depth of penetration and provides a focused pathway of energy delivery at lower voltage <460 V. The voltage/current is adjusted based on tissue impedance automatically to maintain power density for a smooth, high quality and precise cut.

Protective Hull protects the muscle bed from unwanted thermal injury by maintaining a constant distance from the energy source, allowing cutting close to the muscle bed.

Designed to perform safe, precise, contact cut with clean margins to provide **high quality histology** samples and promote healing.

Adaptive waveform automatically adjusts parameters to tissue and **balances coagulation** during cutting to minimise bleeding.

On-demand, controlled SHF microwave coagulation

SHF 5.8 GHz microwave energy distributes heat evenly across the treatment area. The microwave energy is delivered through the tip of the instrument, allowing for application of energy through the distal end.

5.8 GHz Microwave enables **controlled penetration depth**, unaffected by tissue resistance, **reducing the risk of perforation and charring¹**.

Fast delivery of coagulation with controlled spread and depth of penetration to prevent or treat bleeding immediately without changing devices.

CROMA Advanced Energy Platform: The power behind Speedboat Notch

The CROMA Advanced Energy Platform precisely controls **advanced bipolar RF** and **SHF 5.8 GHz microwave** energy to enable a suite of flexible endoscopic devices designed to deliver:

- A unique **usability and safety profile¹⁻⁶**
- Optimal **tissue effect¹⁻⁶**
- Improved **clinical and economic outcomes⁶**
- **Expanded capabilities** in therapeutic endoscopy

Specifications

Specification	Speedboat Notch
Product Reference	PRD-SB1-003
Min. Channel Size	2.8mm
Max Catheter Size	2.4mm
Working Length / Full Length	1.9m / 2.3m
Advanced Bipolar RF (Cut)	25 - 35 Watts
Super High Frequency Microwave (Coag)	15 - 35 Watts
